ABSTRACT

Setariaitalica (L.) P. Beauv. is a modest plant which has international focus of its nutritional values, which can reduce the world problem malnutrition. Focus, research and development of major crops are encouraged than regional crops like millets. Foxtail millet stands second largest cultivated species in millets. India is the largest producer of millets in the world. It accounts for 20% of global production & 80% of Asia's production. One of the oldest crop and been growing in East Asia since sixth millennium BC. As per the nutritional content is concerned, it has substantial amount of protein (12.3 g), carbohydrates (60–65 g), fiber (6 g), minerals (Phosphorous, calcium, iron, zinc, magnesium, sodium), Foxtail millet is very rich in high nutritious like high fiber, quality protein mineral composition & nutri-ceuticals and owns a very important medicinal values, Reducing Blood pressure & protects against heart diseases, prevents diabetes & breast cancer, Helps to optimize kidney, liver and immune system of health.

Keywords: Foxtail millet; functional properties; varieties; photochemical; nutrient properties; processing.

1. INTRODUCTION

Since the era of cultivation, few grains are cultivated for both human and animal consumption, mostly cultivated, produced and consumed crops are Rice, Wheat and Maize. Millets have become a vital part of today's diet [1]. Millets characteristically produces small seed and referred as the annual cereal crops [2]. Millets are typify of perennial small weeds and of *Poaceae* grass family comes under minor cereal species [3]. Greatly combating malnutrition and beneficial to human health. Millets are enhanced as nutri-cereals with high value of proteins, minerals, vital amino acids and vitamins, with 15% India shares highest world total production accompanied by China, Mali, Senegal, Nigeria, Ethiopia, [4]. In semi- arid tropical regions and climatic conditions like Asia and Africa, millets are cultivated and remain the major source of energy. Millets are well suited for cultivation in all Agro-climatic zones and ideal crops for climate resilience of Agriculture. Millets are cultivated with minimal water & inputs hence called as Super foods. Millets can be cultivated in 4 acres, with irrigation water sufficient for one acre of Paddy. Millets requires very less amount of water for cultivation and do not require irrigation or power for production [5].

“Foxtail millet (*Setaria italica*) belongs to the family *Poaceae* and subfamily *Panicoideae*, it is an oldest self pollinated crop growing since 5000 BC in China and 3000 BC in Europe” [6,5].

“Foxtail millet is cultivated, grown and produced in Europe, China, India, Indonesia and Korea” [7]. As compared to rice and wheat, foxtail millet is nutrient-rich whole-grain packed with high level of protein and gluten-free [8]. In India cultivation practices of foxtail millet crop is in (Table 1).

1.1 Morphological Characters

“Foxtail millet (*S.italica* L.) is a significantly used both for food and fodder and it is cultivated in semiarid, dry, temperate, warm regions of Africa and Asia” [10]. Morphologically foxtail millet is a few tiller and single stack plant. Plant height reaches up to 120–200 cm [11]. “A single inflorescence can produce hundreds of small convex seeds measuring about 2 mm in diameter, encased in a thin, papery hull” [12]. “A Full matured plant of foxtail millet has a thin, leaf stems, silky, hairless leaves. The leaves are smooth and hairless, arc-broad and the culms are erect, slender with hollow internodes. The stems are topped by a bristly panicle which is 5–30 cm long and mostly reddish or purplish” [11]. “The seed head is 5–30 cm long, thick, hairy panicle, seed color may vary amongst genotypes and variety, The color of the seeds varies greatly between varieties, that can be red, brown, black and also pale yellow color” [12,13]. “The non-dormant seeds germinate readily in a glass house at densities up to 100 plants per square meter or in field conditions in temperate or tropical regions” [12].

1.2 Production and Consumption

“Foxtail millet is an unrecognized traditional crop where as in many regions it is unaware of its agricultural practices being a traditional and lesser-known grain in many regions, dietary preferences has been overshadowed by more popular options, limited awareness consumption of foxtail millet and also processing facilities” [4]. “However the promotions, availability, cultural factors, regional factors, these factors have contributed to a awareness in foxtail millet consumption, it is important to recognize that consumption benefits would help for certain regions” [14].

According to data of 2023-2024 in both production and consumption of Wheat, Rice and other cereals, India owns the largest production of 309million tons. Crops like Rice, Wheat and

Maize are dominating the significance of minor millets with advanced technologies for production and cultivation [15]. India has the largest producer of millets in the world, mainly India most grown crops namely Foxtail Millet, Bajra, Sorghum and Bulk wheat together contribute more than 18 per cent in world production in 2022 and states account for around 98 per cent in Millet’s production in India during the period 2023-24 [12]. “But despite their nutritional qualities and climate resilience, the consumption of small millets in India has a declined by 83% in the last five decades probably due to easy availability of Rice and Wheat. The total world production of millets rate was 863 lakh ha according to the Ministry of Agriculture & Farmers Welfare, Africa, followed by America, Asia, Europe, Australia, and New Zealand was ranking in production” [12].

1.3 Nutritional Components of Foxtail Millet

The primary constituents of foxtail millets include protein, minerals, dietary fibers, vitamins, carbohydrates, and fat [6]. Foxtail millet grains are rich in protein content (10%–15%), minerals (Fe, Ca, and Zn) dietary fiber (6%–8%), crude fat (7%–8%) [17]. Major millets varieties comparing with foxtail millet, it is shown the higher protein content, it is also having higher number of essentials amino acids including cysteine, methionine, and sulfur-containing amino acids. Comparison to the popular cereal like rice, maize and wheat, with the range of 13% to 15% flour starch resistant has been noticed in Foxtail Millet, considered to be outstanding performance for diabetic profile requirement. According to Yang performing with 259 samples collected from China six provinces of foxtail millet revealed that protein content ranged between 11.85 and 20.58 g/100 g, starch was 65.59–74.12 g/100 g, fat content was ranged between 2.82–4.47 g/100 g. which shows the minimum richly fat and gluten free it outstand with rest of the cereal grains in terms of nutritional evaluation [18].

The major storage proteins in foxtail millet are, albumin, glutelin Prolamin [19] 41% and 77.5% of the total protein in foxtail millet which may vary from varieties to varieties. An average of total protein content is 11.54 g/100 g. The albumin shows the highest protein fraction, followed by gliadin, globulin, glutelin, and other proteins, forming [6]. "By using chromatographic methods, the researchers frequently studied the amino acid (AA) composition of foxtail millet protein. Fat serves as a major source of energy for people, providing 9 Kcal/g of the energy. Foxtail millet contains both saturated 84%–88% and unsaturated fatty acids" [20].

"Foxtail millet has both primary and secondary processing operations involved in foxtail millet. Wetting, de-hulling, and milling comes under primary operation and grinding, fermentation, extrusion, malting, gelatinization, popping, and roasting are secondary operation, which help to transfer the seed to millet grain" [21,20].

1.4 Health Benefits by Consuming Foxtail Millet

According to World Health Organization (WHO), the condition where body does not produce enough insulin is known to be hyperglycemia is

having high blood sugar level. Foxtail Millet has a low glycemic index (GI) which means it raises the blood sugar slowly in the body as compared to wheat and Rice. Foxtail Millets are anti acidic, gluten free and detoxify body [20].

Foxtail millet functions as agent against life threatening disorders such as cancer, cardiovascular diseases, diabetes, and high blood pressure.

- 1. Promoting digestive health:** "High nutritious like high fiber, quality protein mineral composition & nutri-ceuticals foxtail millet is a insoluble dietary fibers could delay the diffusion of glucose and promote its absorption in the gastrointestinal tract" [22]. Additionally, the insoluble fiber found in millet facilitates efficient digestion and encourages regularity in bowel movements.
- 2. Strong Immunity:** Foxtail millet is a rich source of vitamins and minerals which boost immunity in our body. Strong immunity is required to fight against diseases. So including foxtail millet in your diet will improve your immunity.
 - a) Protein:** "foxtail millet contains 12.3 g of protein per 100 gm of grains, which helps to built proper nervous system" [20].
 - b) Iron :** 2.8 mg of iron per 100 gm contains in foxtail millet. Where, iron is essential for brain oxygenation and prevents Alzheimer's disease [23].
 - c) Phosphorus:** helps for the formation of bones and teeth [20].
 - d) Zinc:** essential for a strong immune system, supports metabolic function, and promotes wound healing [20].
 - e) B vitamins:** to maintain heart and kidney function, muscle response, and a healthy nervous system [3].
 - f) B₁(thiamin), B₃(niacin), B₂(riboflavin), B₆(pyridoxine), and B₉(foliate):** They help in the body metabolize fats and protein as well as promote optimal brain function [3].
 - g) Niacin (vitamin B₃):** "millet can help lower cholesterol. Helps to optimize kidney, liver and immune system of health. Aids in treating respiratory conditions such as asthma. Specifically, the millet protein concentrate was observed to significantly increase levels of plasma adiponectin and HDL cholesterol" [21,24].

Table 2. Properties of foxtail millet

Sl. no	Diseases	Functional factors	Mechanism of action	References
1	Anticarcinogens	Foxtail millets have reported to inhibit the growth of cancer cells	Liver cancer: To control early and advanced stage carcinogenesis in liver, adenocarcinoma cells which are the anti-proliferative effect in terms of DNA stratification inhibitory activity in Liver cancer Colon cancer: Foxtail millet bran (FMBP) suppresses the cell growth through induction of G1 phase arrest in which the loss of mitochondrial trans-membrane where phenolic extracts induced caspase dependent apoptosis in colon cancer.	[25,26]
2	Anti-hyperglycemic	Counteracting the accumulation of excess sugar in the blood	Foxtail millet exhibited a significant dose dependent decrease on fasting blood glucose but beyond this dosage, the fasting blood glucose level stayed more or less constant at 41%	[27,28]
3	Anti-hypertensive	Daily consumption of 50 g whole foxtail millet significantly reduced BP	foxtail millet protein hydrolysates could significantly reduce the BP	[26]
4	Antioxidants	Phenolic acids, carotenoids, tannins, flavonoids provides energy.	Foxtail millet is abundant in high-quality protein, dietary fiber, and various vitamins (such as B-complex vitamins and vitamins A and E). all of them necessary to transform carbohydrates into glucose, which is the fuel used by the body to produce energy.	[29]

1.5 Utilization Trends of Foxtail Millet

Foxtail millet flour is composite with wheat flour to make chapatti, bread which increases the nutritional properties, [6]. Bakery goods like bread shows the study that high nutrient content with low glycemic index [30]. Cookies, promotes the best formulation of nutrient content like protein (11.8%), carbohydrate (45%), fiber (4.6%), water (5%) and ash (1.25%) [10].

- a) **Dried seed:** Dried millets seeds are replacement to rice, which also adds great nutritional value to everyday meal [31].
- b) **Flour:** Millet flour is commonly used to make bread, chapattis, in the countries where this cereal is widely cultivated. Being gluten-free, millet flour is also used to replace wheat in culinary preparations [30]

- c) **Flakes:** Millets serves as an excellent option for a morning cereals, offering vital nutrients and a substantial energy boost to sustain one throughout the day. Additionally, millets flakes can be incorporated into salads, yogurt and various culinary preparations [3]
- d) **Essential oil:** Millet essential oil can be ingested to improve digestive health and enhance immune function. It is widely utilized externally as a moisturizer and revitalize for hair [4].
- e) **Tincture:** The health advantages of millets can be derived from this alcohol based solution, which enhances the herbs antioxidant properties, which supports the immune function and assisting in the prevention of chronic illness [20].
- f) **Capsules:** powdered millet seeds, which has high amounts of soluble and insoluble

fiber. These capsules are commonly consumed to regulate digestion as well as control blood sugar levels after heavy meals [3].

- g) **Beverages:** fermented wine, a Korean fermented wine with rice and foxtail millet increases the quality and flavor [28] and also a traditional sweet gamju usually served as dessert made of beverage [3].
- h) **Butter:** Incorporations of foxtail millet with peanuts to prepare peanut butter [30].
- i) **Fermented paste:** soy and foxtail millet (soybean fermented paste) resulting in great nutritional content and increased self life [32-34].

2. CONCLUSION

Millet's nutritional value is rounded and this article emphasizes the significance and adaptability of the nutrition profile of foxtail millet, characterized by the significant content of protein, essential amino acids, dietary fiber, vitamins, minerals, essential fatty acids, antioxidants and various photochemical renders them a beneficial component of the diet. The demand for health- enhancing food products continues to rise the food industry is increasingly turning to underutilized crop. Presence of smaller amounts of other vitamins and minerals, such as vitamin B, choline, iron. Supporting digestive wellness, millet is abundant in dietary fiber and exhibits pre biotic properties, thereby nourishing the beneficial bacteria present in gastrointestinal tract. Foxtail millet is very rich in high nutritious like high fiber, quality protein mineral composition & nutri-ceuticals and owns a very important medicinal values, Reducing Blood pressure & protects against heart diseases, prevents diabetes & breast cancer, Helps to optimize kidney, liver and immune system of health.
